

A civilian skills platform

On 3 July 2026, a Swiss association was founded around a decidedly innovative concept. It provides a civilian platform for registering skills across many fields, and is currently seeking partners throughout the country: municipalities, companies with large workforces and, of course, all institutions and state bodies directly concerned with the protection of the population.

Given the current state of the world we live in, Swiss Radio Rescue fills a gap in civilian skills data — data that proves highly valuable in a crisis. More broadly, whenever normality breaks down for the population.

Admittedly, as long as all goes well, little thought is given to hypothetical deterioration and to consequences that can turn insidious and weigh heavily on a demographic and social balance sheet.

Not a day passes without the media reminding us of the great uncertainty facing the Swiss population: climate disruption, blackouts, rationing of all kinds, conflict. Preparing is not far-fetched — and neither is getting personally involved.

An independent, self-managed civilian system

The association has just launched an online platform that is also a new source of information — indirectly useful to every resident in Switzerland. Above all, it is an independent, self-managed civilian system allowing anyone to register their skills, the resources they can bring to bear and their availability within a geographical area — on the principle that there is strength in unity.

The creation of the SRR association owes nothing to chance, nor to paranoid thinking, but to a growing awareness among the population. SRR is built on the concept of resilience — indispensable when nothing works normally any more.

SRR competes with no public assistance service. It is entirely neutral, and the information held in its database is a major asset at the decisive moment. By design, the platform keeps growing even during an operation, and distributes useful information to recovery forces, to SRR responders themselves and to partners registered as such within SRR.

Data protection

No personal data is disclosed other than in the event of specific incidents requiring people to be called upon.

Communications that never stop

The SRR platform includes high-performance communication tools, alerting systems for call-outs and a messaging service independent of the Internet, able to transmit whatever happens, since its power supply is fully backed up.

A highly developed network, maintained on a civilian basis by Swiss radio amateurs, ensures continuity of communications even without commercial or state infrastructure. Everything that depends on the Internet — such as private and business telephony — can be reinforced by adding an SRR terminal, which then acts as a secondary civilian network for response and terrestrial communication in a crisis.

A free service, with no commercial use of data

The <https://srr.contact> platform is entirely free of charge. It does not use the data collected for commercial purposes and does not share this information broadly: it simply makes it possible to offer skills sought by partners. It serves as an alerting hub and as a telecommunications system for civilian coordination in support of the population.

The better structured the civilian network, the better the population is protected.

Do you represent a municipality, a company or an institution?

The association is seeking partners throughout the country. Becoming a partner means:

- ☐ gaining access to the civilian skills available in your area, when they matter most;
- ☐ having an alerting and coordination channel that keeps working without the Internet or mains power;
- ☐ strengthening your area's preparedness without creating a new structure or competing with existing services.

srr.contact

Your skills, your alerts, your civilian network.
